The Mysterious Human Heart

Premiering Monday, October 15, 2007

9:00 PM MST (check local listings)

The Mysterious Human Heart is a new, in-depth, and comprehensive television series from award-winning filmmaker David Grubin about the heart: how it works, what can go wrong with it, and how we treat it.

This three-part series follows the true, compelling stories of men and women, young and old alike, whose hearts have led them to a brush with mortality. Through these encounters, the series will explore the most common misconceptions about this unique organ, and document the latest scientific and medical revelations - discoveries that have transformed our understanding of the heart and given us new insights into the best ways to prevent heart disease and treat it when it does occur.

Continue the healthy dialogue with your patients by encouraging them to watch *The Mysterious Human Heart* series beginning this October on PBS.
