

Cytology Services

Sonora Quest Laboratories and Pathology Specialists of Arizona are highly experienced in GYN, Non-GYN and fine needle (FNA) cytology, performing over 200K combined tests annually.

We have 12 cytopathologists certified by the American Board of Pathology that are available for consultative support with over 30 cytotechnologists certified by the American Society of Clinical Pathologists.

We participate in the College of American Pathology (CAP) annual proficiency-testing program for gynecologic and non-gynecologic cytology.

All GYN ThinPrep®Pap samples are reviewed on the Hologic Imaging System by a cytotechnologist and all abnormal Pap samples are examined and reported by a pathologist.

Monthly summary reports listing all cases and their diagnoses are provided to all ordering providers.

All ThinPrep® samples assessed as unsatisfactory due to the presence of blood are re-processed utilizing validated technology in an attempt to render the specimen satisfactory for interpretation.
